

BrightScanner - Wallet Scanner

BrightScanner simulates the process of scanning through thousands of these seed phrases in real-time searching for wallets with actual balances. Most results will show empty or invalid wallets, but every now and then, a wallet with a balance appears.

When that happens, you can claim the balance on the discovered wallet to secure it.

Fair Usage Policy

BrightScanner is strictly against wallet hoarding. To ensure fair usage for all users:

- A wallet must be claimed before a new one becomes available to a user.
- This policy prevents users from stockpiling wallets and encourages responsible use of the platform.

Due to the growing number of users, each user may be limited to discovering 5 to 10 wallets per day. This limit helps maintain system performance and ensures everyone has a fair chance to use the tool effectively.

WARNING

This app is for locating and recovering funds that could be compromised by a Threat Actor.

You are NOT authorized to use this app in any way that causes harm or damages to wallets you don't own.

The developers are not responsible for any misuse. Ensure you have permission before interacting with found wallets.

Unauthorized use of this app could be illegal and punishable by law. Use at your own risk.
